

Newport Apply Website Report

Topic: Business career application website

1. Project Purpose

This project presents Newport Apply, a static business career application website. The site lets visitors review open roles, explore workplace media, and view a realistic application interface. It is designed for GitHub Pages hosting.

2. Technologies Used

- HTML5: Page structure, static application interface, table, media tags, and template tag.
- Bootstrap CSS: Navbar, grid system, table, buttons, and form-style interface components.
- CSS: Custom visual design in `css/style.css`.
- Static pages: The website uses HTML and CSS only, so it is easier to explain.
- GitHub Pages: Static website hosting without a backend.

3. Assignment Requirements

Requirement	Project Match
At least 4 HTML pages	<code>index.html</code> , <code>positions.html</code> , <code>media.html</code> , <code>apply.html</code>
Template	HTML template element inside <code>positions.html</code>
Application UI	Static application interface inside <code>apply.html</code>
Inline CSS	Inline style attributes in <code>index.html</code> and <code>apply.html</code>
Internal CSS	Style block inside <code>media.html</code>
External CSS	<code>css/style.css</code>
Images	Local image files inside <code>assets/img</code>
Sound files	<code>newport-apply-announcement.wav</code> and <code>newport-apply-tip.wav</code>
Video files	<code>newport-apply-tour.mp4</code> and <code>newport-apply-process.mp4</code>
Table	Open positions table inside <code>positions.html</code>

4. Application Screen

The application page is a static user interface preview. The fields represent a realistic job application screen, but the button does not send data. The project does not use a backend or email sending.

5. Short Explanation

The site is static, so it can be hosted easily on GitHub Pages. Bootstrap CSS makes the navbar, grid layout, table, buttons, and application interface easier to explain. The custom colors, spacing, and page layout are collected in `css/style.css`.
